

National Casualty Co.
Program: N2G Reverse Flow ISO Capital Assets (Note: Only ISO/NCCI Rated Business
Annual Statement Line: Earthquake (120)

Exhibit 16 - New Program: For California
Evaluated as of June 30, 2025

This new program is based upon the loss costs of ISO. Please review attached loss cost forms.
This program has been written in other states which also use ISO as the basis for their loss costs.

The Magellan Global Risk Program has been filed and approved through National Casualty Company in other jurisdictions.
The reason for the new program development is to get it filed and approved in California.
Currently, there are no similar programs that exist.

This new program is needed to specifically target companies headquartered outside of the United States of America but with regional operations within the United States. This program applies to multi-national risks with domestic exposure. It is exclusively distributed through N2G through National Casualty Company only. N2G does not have access, nor will N2G have access in the future, to any other Nationwide companies doing business in the state of California. This program is managed exclusively by N2G, a partnership between Nationwide and Generali. Generali is a separate company with its own distribution channels. The other output policy program, AAIS COP, prohibits operations outside the U.S., and is a standard commercial lines market program.

The loss costs that are adopted are as shown below, of which we are using the most recently approved (13-9656):
